

Author Guidelines: Journal of Computing and Numerical Sciences

1. Scope and Mission

The *Journal of Computing and Numerical Sciences (JCNS)* publishes original, high-quality research in numerical analysis, scientific computing, computational mathematics, applied mathematics, optimization, mathematical modeling, data science, artificial intelligence, machine learning, high-performance computing, and related computational disciplines. The journal welcomes theoretical developments, novel numerical algorithms, computational methodologies, software-oriented research, and interdisciplinary applications that advance computational and numerical sciences.

Subject areas:

JCNS welcomes submissions in (but not limited to):

- Numerical Analysis
- Scientific Computing
- Computational Mathematics
- Applied Mathematics
- Mathematical Modeling
- Optimization
- Differential Equations
- Fractional Calculus
- Approximation Theory
- Numerical Linear Algebra
- Computational Fluid Dynamics
- Artificial Intelligence
- Machine Learning
- Deep Learning
- Data Science
- Computational Statistics
- Graph Theory
- Network Analysis
- High-Performance Computing
- Parallel Computing
- Scientific Visualization
- Computational Physics
- Computational Engineering
- Mathematical Biology
- Financial Mathematics
- Image Processing
- Computational Geometry

2. Types of Manuscripts

The *Journal of Computing and Numerical Sciences (JCNS)* accepts the following categories of manuscripts:

2.1 Original Research Articles

Original Research Articles present significant theoretical, computational, or applied research that advances the fields of numerical analysis, computational mathematics, scientific computing, optimization, mathematical modeling, artificial intelligence, machine learning, data science, and related disciplines.

- **Length:** 4,000–8,000 words
- **Abstract:** Unstructured, 150–250 words
- **Keywords:** 4–6

2.2 Review Articles

Review Articles provide comprehensive and critical evaluations of recent developments, emerging trends, and future research directions in computational and numerical sciences.

- **Length:** 6,000–10,000 words

2.3 Short Communications

Short Communications report novel algorithms, computational techniques, software developments, significant theoretical findings, or preliminary results of exceptional importance that merit rapid publication.

- **Length:** 1,500–3,000 words
- **Abstract:** Up to 150 words

2.4 Survey Papers

Survey Papers present an in-depth synthesis of a specialized research area, identifying current challenges, opportunities, and future directions.

- **Length:** 8,000–12,000 words

2.5 Software and Computational Method Articles

These articles describe innovative computational software, numerical libraries, simulation frameworks, computational tools, benchmarking studies, or reproducible computational methodologies with demonstrated scientific or practical significance.

- **Length:** 3,000–6,000 words
- **Software availability is strongly encouraged.**

3. Manuscript Preparation

Authors should prepare manuscripts according to the **Manuscript Submission Template for the Journal of Computing and Numerical Sciences**.

The template includes instructions regarding:

- Title page
- Abstract
- Keywords
- Main text
- Mathematical equations
- Tables and figures
- References
- LaTeX and Microsoft Word formatting

4. Submission Process

Manuscripts should be submitted electronically through the journal's online submission system or via the Editorial Office.

Each submission must include:

- Cover Letter
- Blinded Manuscript
- Title Page
- Copyright/License Agreement
- Supplementary Files (if applicable)

5. Peer Review Process

- JCNS follows a **double-blind peer-review** process.
- Authors and reviewers remain anonymous.
- Every manuscript is evaluated by at least two independent reviewers.
- Final publication decisions are made by the Editor-in-Chief based on reviewers' recommendations.

6. Ethical Responsibilities

- Authors must ensure that:
- the manuscript is original;
- it has not been published previously;

- it is not under consideration elsewhere;
- all authors approve the submission;
- plagiarism, duplicate publication, and data fabrication are strictly prohibited.
- The journal may use plagiarism detection software before peer review.

7. Authorship Criteria

- Every listed author should have substantially contributed to:
- study conception or design;
- analysis or interpretation;
- drafting or revising the manuscript;
- approval of the final version.
- Guest or honorary authorship is not permitted.

8. Conflict of Interest

- Authors must disclose any financial, personal, academic, or professional conflicts that could influence the reported work.
- If none exist, include:
- **"The authors declare no conflict of interest."**

9. Funding

- All financial support must be acknowledged.
- Grant numbers should be provided where applicable.

10. Data and Software Availability

- Authors are encouraged to make datasets, computer code, algorithms, and software publicly available whenever possible.
- Repository links may be included in the manuscript.
